EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

In the Specification

On page 5, line 14, "Rach" has been changed to -- Each --.

The above change corrects an obvious typographical error.

In the Drawings

The following changes to the drawings have been approved by the examiner:

The cross-sectional views of FIGs. 1-4 are to have hatching per 37 C.F.R. §1.84(h)(3).

In order to avoid abandonment of the application, applicant must make these drawing changes.

Reasons For Allowance

The following is an examiner's statement of reasons for allowance:

JP 58057565 A2 (Shizutani et al.) shows a sealing element 10 between a stator shroud 6 and a rotor disc 3. The sealing element, in response to rotational forces, moves radially outward in Fig. 2 to seal a space between the rotor and stator part. The reference however, does not teach nor fairly suggest to one having ordinary skill in the art the seal being annular with a first axial end disposed over an arm projecting from an axial end of the rotor disc and at least partly fixed to the arm, and the seal second end moving radially under rotor rotational forces. In the examiner's opinion, one having ordinary skill in the art would not have been motivated to alter the Shizutani et al. seal to be annular and have a first end fixed to a rotor arm and the second end moving radially under rotor rotational forces since Shizutani et al. only shows intermittent seals 10 in which the whole seal moves relative to the rotor disk 3.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Cited Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

JP 58096105 A is cited for showing a seal 16 which moves radially B in response to rotor disc 1 centrifugal forces to seal a space between a rotor disc arm 42 and a rotor stage spacer 2. The seal 16 is not fixed to any part of the disc arm 42.
